

Dreamweaver

Getting the Student's Data Files

You will need to have a removable media (USB flash drive, floppy disk, CD R/W or Zip disk) connected to your computer.

- 1) Start your web browser
- 2) Go to www.course.com website
- 3) Click on the link (right side of the screen) Student Downloads
- 4) When the page is displayed, look for your book (ISBN # 978-1-4239-1242-2) – you will need to type the ISBN number, with dashes, in the box shown on the screen below

- 5) After you type the ISBN number, click on the SEARCH button
- 6) The new page will show the picture of the cover of your Dreamweaver book. You will find, again, on the right side, the link Student Downloads. Click on that link
- 7) A new screen will be shown and you will see again the image of the cover of your Dreamweaver book and some links below it.
- 8) The links below **Data Files for Students (Windows)** are the ones you will need to click on (Run) to download the data files to your storage media. Some of the data files will be zipped and you will then need to unzip them.
- 9) You can also download the links (files) under **Additional Student Files**.
